Engineered for easy, accurate impedance and S-parameter measurements on multi-port 10/25/28 Gbps (40G/100G) designs
- Highest resolution TDR/TDT measurements
- Fast and accurate multiport S-parameters, up to 16 ports
- World’s easiest-to-use solution
Signal integrity challenges abound

As new digital designs increase in data rates to 28 Gb/s and beyond, signal integrity issues become more challenging. Additionally, industry standards such as IEEE 802.3 ba/bj/bm (40 Gb/100 Gb Ethernet), Optical Inter-networking Forum (OIF) CEI 3.0, Fibre channel, PCI Express, USB, and InfiniBand require the use of TDR/TDT and S-parameter measurements to ensure compliance and system interoperability.

A fully-integrated 86100D TDR/TDT/S-parameter measurement system

Designed for both novice and expert users alike, the Keysight Technologies, Inc. N1055A remote head module provides time-domain reflectometry and transmission (TDR/TDT) capability for the 86100D DCA-X oscilloscope platform, providing fast and accurate impedance and S-parameter measurements on high-speed designs that have up to 16 ports. The 86100D DCA-X oscilloscope mainframe can be configured with one to four N1055A TDR/TDT plug-in modules to provide a 2- to 16-channel TDR/TDT measurement system that is both economical and accurate. The 2/4 port TDR/TDT remote heads can be configured with sampler bandwidth of 35 GHz or 50 GHz, providing single-ended and differential measurement capability including True-Mode stimulus functionality.

Measurements include:

- **Time-Domain Reflectometry (TDR)**
  - Impedance measurements
  - Locate the position and nature of each discontinuity
  - Propagation/time delay
  - Excess reactance (capacitance or inductance)
  - Effective dielectric constant

- **Time-Domain Transmission (TDT)**
  - Step response
  - Propagation/time delay
  - Propagation velocity
  - Rise-time degradation
  - Near-end crosstalk (NEXT)
  - Far-end crosstalk (FEXT)
  - Skew

- **S-parameters (86100D-202)**
  - Return loss
  - Insertion loss
  - Crosstalk
  - Mode conversion
    - Differential- to common-mode conversion (SCDxx)
    - Common- to differential-mode conversion (SDCxx)
Single-ended and differential device testing

Each TDR/TDT module provides single-ended, differential and common mode measurement capability, including True-Mode stimulus capability.

Complete S-parameter analysis

Full S-parameter measurements from DC to more than 50 GHz on up to 16 ports. Export single-ended and mixed-mode data in Touchstone file format.

Real-time results

Calibrated impedance and S-parameter results are displayed in real-time (no external application, monitor or computer required).

ECal DC - 67 GHz module support

Electronic calibration (ECal) modules provide fast and accurate calibrations with a minimum number of connections.

Calibration made easy

TDR/TDT calibration improves measurement accuracy. A built-in calibration wizard supports both mechanical standards (SOLT) and ECal modules.

Fast TDR edge speed

Fast edge speeds yield higher TDR resolution.

- 8 ps (typ) 50 GHz, calibrated
- 9 ps (typ) 50 GHz
- 18 ps (typ) 35 GHz
Built-in ESD/EOS protection
Each remote head integrates 67-GHz diode limiters to help protect against electrostatic discharge (ESD) and electrical overstress (EOS).

Adjustable edge speed
The effective TDR edge speed may be adjusted (faster or slower) to comply with standards-based testing.

N1055A bandwidth options
- 35 GHz (2.92 mm)*
- 50 GHz (1.85 mm)
  *upgradable to 50 GHz

N1055A channel count options
- 2 channels per module*
- 4 channels per module
  *upgradable to 4 channel

High-bandwidth oscilloscope
The N1055A’s receiver can be used as an oscilloscope to analyze waveforms and perform precision jitter analysis (86100D-200) on high-speed data signals.

Up to 16 channels per mainframe
Up to 16 TDR/TDT channels per 86100D DCA-X mainframe minimize cable reconnections and facilitate efficient near-end crosstalk (NEXT) and far-end crosstalk (FEXT) measurements.

Connector type option
Minimize use of adapters and cables (and save money) by choosing the connector style that suits your needs (male or female connector).
Highest resolution TDR/TDT measurements

High TDR resolution is essential for accurately characterizing complex high-speed structures. With TDR step edge speeds as fast as 8 ps and receiver bandwidths of 50 GHz, the DCA-TDR solution resolves the magnitude and location of impedance discontinuities with unmatched performance.

TDR edge speed

TDR resolution is determined by the rise time of the TDR step generator and the effective dielectric constant of the device under test (DUT).

The edge speed that is delivered to the DUT is called the transmitted edge speed. It is measured at the output of the remote head by a high-bandwidth receiver.

10-90% edge speed (raw hardware performance):
- 35 GHz option: < 18 ps typical
- 50 GHz option: < 9 ps typical

10-90% edge speed (calibrated performance):
- 35 GHz option: 18 ps typical
- 50 GHz option: 8 ps typical

Bandwidth options:
- 35 GHz (2.92 mm connector)
- 50 GHz (1.85 mm connector)

Remote head may be configured with male or female connectors (chosen at time of order).

Bandwidth upgrades:
Upgrade a 35-GHz module to 50 GHz by ordering the appropriate N1055AU option (requires Return-to-Keysight).

Channel/port Count:
- 2 channel
- 4 channel

Channel count upgrades:
For example, a 4-channel module is required to perform both TDR and TDT measurements on a device having two differential pairs (4 ports). Upgrade from 2 channels to 4 channels by ordering the appropriate N1055AU option (requires Return-to-Keysight).
Adjutable TDR rise time

Standards typically specify 10-90% or 20-80% edge speeds to be used for compliant measurements. FlexDCA makes it easy to control the effective rise time of the stimulus pulse so users can perform compliant measurements.

Ultra-slim remote heads optimize signal fidelity

The industry’s lightest and smallest remote TDR heads allow direct connection to the device under test using a TDR/TDT step generator and low-noise sampler located at the end of a flexible 1.6-meter phase-stable cable. This ensures optimal step fidelity and minimizes signal degradation due to adapters or cables. Remote heads can be configured with male or female connectors to further minimize the number of adapters used in the system.

Single-ended and differential stimulus

The TDR/TDT remote heads may be configured for single-ended (SE), differential- or common-mode measurements. Step polarity, skew, amplitude and repetition rate can be independently configured for each remote head.

Additionally, the N1055A ultra-thin remote head has also been designed so it can be directly connected to most high-bandwidth TDR probes on the market today, thereby minimizing signal degradation due to cables.

Connector options:

- 35 GHz 2.92 mm: male or female
- 50 GHz 1.85 mm: male or female

*Note - All remote heads within a single module must be equipped with the same connector type.

Two remote heads form a differential pair; heads may be held together using a remote head clamp (two clamps are shipped with each module). When clamped, pin-to-pin spacing is 10 mm.

An easy-to-use graphical user interface simplifies single-ended and differential device setup.

Ultra-thin remote heads connect directly to TDR probes or may be clamped together to form a differential pair (clamp included).
Fast and accurate multi-port S-parameters (86100D-202)

Scattering parameters (S-parameters) are generated in real-time within the oscilloscope for simultaneous display with time domain results. They are mathematically derived from TDR and TDT measurements using the 86100D Option 202 enhanced impedance and S-parameter analysis software. The N1055A’s fast rise time enables calibrated S-parameter measurements to more than 50 GHz.

Magnitude, phase and group delay plots can be configured at the touch of a button.

FlexDCA displays accurate S-parameter magnitude, phase and group delay plots simultaneously.

Minimize re-connections, maximize productivity

With up to 16 TDR/TDT channels, the DCA-TDR solution also helps to minimize cable re-connections and facilitate more efficient near end crosstalk (NEXT) and far end crosstalk (FEXT) measurements both in R&D as well as high-volume test applications. For example, a 16-port system can measure NEXT and FEXT on up to four differential lanes simultaneously.

Perform efficient near-end crosstalk (NEXT) and far-end crosstalk (FEXT) measurements on differential designs that have up to four lanes.
The 86100D-based system combines its powerful FlexDCA graphical user interface with the world’s only TDR/TDT solution that leverages accurate, easy-to-use electronic calibration (ECal) technology. This combination provides calibrated impedance and S-parameter results that are displayed in real-time within the FlexDCA user interface – no external application, monitor or computer is required.

**TDR/TDT calibration**

For users who do not need precision measurements and prefer to perform simple, quick impedance and S-parameter measurements on a device, a TDR/TDT calibration is not required thanks to the high-fidelity performance of the raw hardware.

Traditional mechanical Short-Open-Load-Thru (SOLT) calibration standards are supported, but a significant breakthrough for both accuracy and ease-of-use is achieved through the support of Electronic Calibration (ECal) modules, an advanced calibration technique originally developed for the “gold standard” in S-parameter measurements, the Vector Network Analyzer (VNA). A special Keysight N4694A DC-67 GHz ECal module was developed for the DCA-TDR that enables fast and accurate calibration and de-skew of TDR modules.

N4694A DC-67 GHz electronic calibration (ECal) modules make TDR calibration and de-skew fast and easy.

The built-in calibration wizard also supports a variety of other calibration methods that include:

- ECal-based
- SOLT with calibration kit
- SLT with calibration kit
- SLT with generic standards

SOLT = Short, Open, Load and Thru
Easy set-up using graphical user interface

A graphical user interface makes it easy to configure the instrument. Port names may also be customized using meaningful names that relate to the device being tested (Example: TX1+, TX1- or J1+, J1-). FlexDCA uses the custom names when displaying signals and saving waveforms.

Built-in ESD/EOS protection

Each remote head integrates a high-performance TDR step generator and high-bandwidth sampling into a microcircuit located behind the connector. To protect these high-performance components against electrostatic discharge (ESD) and electrical overstress (EOS), each microcircuit also integrates multiple 67-GHz diode limiters into the design. While the user must still follow safe ESD and EOS practices, the diode limiters offer additional protection and help protect your investment.

Customizable displays

With the click of a button, FlexDCA can be configured to display impedance and S-parameter waveforms the way you want using overlapped, tiled or zoom-tiled displays.
N1055A receiver-only operation

The N1055A TDR/TDT module, equipped with 16 bit low-noise samplers, can also be used as a receiver only and perform accurate oscilloscope, eye/mask and jitter/noise (86100D-200/300) measurements. When used with the 86107A or 86100D-PTB precision timebase circuits, the N1055A provides a high-bandwidth measurement system with < 100 fs rms intrinsic random jitter.

Easy channel and eye diagram simulations (86100D Option SIM)

Generate waveform and eye diagram simulations without using an external pattern generator. 86100D Option SIM provides integrated embedding and de-embedding channel simulations using S-parameters generated using the DCA (or imported from other tools).

One application, FlexDCA, provides comprehensive measurement capability

FlexDCA software integrates impedance (TDR/TDT), S-parameter (86100D-202), oscilloscope, eye/mask, jitter/noise (Option 200/300), equalization (Option 201), channel simulation (Option SIM) and other powerful features into a single application that runs on the 86100D mainframe or on a PC (using N1010A FlexDCA). For more information, refer to www.keysight.com/find/flexdca.

The N1055A module is supported by all 86100D DCA-X DCA modes of operation.

1. “Transmitted” edge speed is the TDR edge speed at the output of the remote head. Step speed is validated using a connector-to-connector measurement using a high-bandwidth receiver (>60 GHz).
Ordering options

**N1055A 35/50 GHz 2/4 Port TDR/TDT remote head**
Choose ONE option:
- N1055A-32F 35 GHz, 2 channel, 2.92 mm, female
- N1055A-32M 35 GHz, 2 channel, 2.92 mm, male
- N1055A-34F 35 GHz, 4 channel, 2.92 mm, female
- N1055A-34M 35 GHz, 4 channel, 2.92 mm, male
- N1055A-52F 50 GHz, 2 channel, 1.85 mm, female
- N1055A-52M 50 GHz, 2 channel, 1.85 mm, male
- N1055A-54F 50 GHz, 4 channel, 1.85 mm, female
- N1055A-54M 50 GHz, 4 channel, 1.85 mm, male

**N1055A included accessories**
- N1027A-1CL Cable management clips (6 at yellow, pink, blue, green)
- N1027A-2CL 2 remote head clips
- 8710-1765 Torque wrench 8 lb-in, 5/16 in
- N1027A-1CF Protective cap for 1.85 mm, female
- N1027A-1CM Protective cap for 1.85 mm, male
- N1027A-3CF Protective cap for 2.92 mm, female
- N1027A-3CM Protective cap for 2.92 mm, male

**N1055A optional accessories**
- N1027A-3MC Storage case for N1055A module
- N1027A-3AC Accessory case for N1055A module
- N1027A-1C1 Coaxial cable 1.85 mm, M/M, 67 GHz, 10 cm

**Multiple module configurations require 86100D-ETR**
86100D-ETR is required if using an N1055A module to perform a TDT measurement using a separate DCA module (for example N1045A, N1055A, 86117A, etc.) as the receiver. In this configuration, 86100D Option ETR provides internal cabling for module synchronization.

**Calibration kits**
Electronic calibration (ECal) modules
- N4694A-HMM ECal module, DC-67 GHz, 1.85 mm, male-male
- N4694A-HFF ECal module, DCA-67 GHz, 1.85 mm, female-female
- N4694A-HMF ECal module, DCA-67 GHz, 1.85 mm, male-female

Mechanical calibration kits
- 85033D 3.5mm calibration kit, 30 kHz to 6 GHz
- 85033E Standard mechanical calibration kit, DC to 9 GHz, 3.5 mm
- 85052B Standard mechanical calibration kit, DC to 26.5 GHz, 3.5 mm
- 85052C Precision mechanical calibration kit, DC to 26.5 GHz, 3.5 mm
- 85052D Economy mechanical calibration kit, DC to 26.5 GHz, 3.5 mm
- 85056A Standard mechanical calibration kit, DC to 50 GHz, 2.4 mm
- 85056D Economy mechanical calibration kit, DC to 50 GHz, 2.4 mm
- 85056K Mechanical calibration kit, DC to 50 GHz, 2.4 mm and 2.92 mm
- 85058B Standard mechanical calibration kit, DC to 67 GHz, 1.85 mm
- 85058E Economy mechanical calibration kit, DC to 67 GHz, 1.85 mm
- Generic calibration kits
